

Peace – This is the “Quant” – Luxalgo description.

This is a professional-grade setup designed specifically for the "low-maintenance" trader. Below is a comprehensive description of the indicator's logic, its ideal use case, and the exact process for setting up alerts.

Indicator Description: MFB - Premarket 5 min Sweep/FVG-123

This indicator is a specialized execution engine designed for the **5-minute timeframe**. It filters the complex "Universal MFB" logic to focus exclusively on **Liquidity Sweeps** followed by an **FVG-123 reversal**.

1. Why Selective Sweeps (7 AM – 12 PM EST)?

During the pre-market (7 AM – 9:30 AM) and the morning session (9:30 AM – 12 PM), the market is seeking its "daily direction."

- **The Logic:** During non-peak volatility hours, price often moves toward "Liquidity Pools" (Session Highs/Lows) to "refuel" before making a larger move. By only signaling **Sweeps**, we are catching the market when it has exhausted its current momentum and is ready to "snap back" in the opposite direction.
- **Why not "Flow" (Continuation)?** Flow signals often require constant monitoring of high volatility. Reversal sweeps, however, provide a clear "Decision Area" (the level) and a clear "Safety Net" (the stop loss), which is much better for low-screen-time traders.

2. Does it work during Market Hours?

Yes. While it is optimized for the pre-market "Liquidity Grab," the logic holds true during market hours. The 9:30 AM open often involves a sweep of the 9:30 Open Low or Asian High before the trend of the day is established. This indicator will identify those high-probability turning points throughout the day.

3. Perfect for Busy Schedules & Caregivers

This tool is built for those who cannot sit at a desk for 8 hours.

- **Set and Forget:** You don't need to watch the "meandering" of price.

- **Instant Clarity:** When a signal fires, it automatically draws your **Entry, Stop Loss,** and **1:2 Take Profit** lines. You have everything you need to manage the trade in 30 seconds.

4. Ecosystem: The "Clean" Chart Setup

This indicator is designed to work in tandem with the "**Momentum Flow Build w/FVG v6 (clean)**" indicator.

- **Momentum Flow Build** provides the *context* (identifying the session boxes and FVG zones).
- **MFB - Premarket** provides the *action* (calculating the sweeps of those exact levels and triggering the trade lines).
Together, they create a clutter-free chart where you can see exactly which level provided the "fuel" for your trade.

Best Way to Create an Alert (The Specific Process)

To ensure you get the most reliable signals without "false alarms," follow this exact process:

1. **Set Timeframe to 5m:** Ensure your chart is on the 5-minute interval before creating the alert.
2. **Open Alert Dialog:** Click the **Alert** icon in the top toolbar or right-click the indicator in your legend.
3. **Select Condition:**
 - In the first dropdown, select **MFB - Premarket 5 min Sweep/FVG-123**.
 - In the second dropdown (underneath the indicator name), select the named condition: **"5 min sweep only"**.
4. **Trigger (Crucial):** Select **"Once Per Bar Close"**. This is the most important step. It prevents the alert from firing while the candle is still moving (which could result in a signal that disappears). By waiting for the bar close, the FVG-123 pattern is officially confirmed.
5. **Notification:** Ensure "Notify on App" or "Send Email" is checked so you can step away from your screen with confidence.

Quant Note: By using the named "5 min sweep only" condition, you are specifically calling the refined logic we built today, ensuring you only get the highest-probability reversal setups.
