MFB - Simple Peace Trading Process

Here is the mindset for MNQ –

CISD strategy – this is a trade entry signal regardless of Opening Range levels or Value Range – The **CISD at key levels is "its own Framework"**

I have **certainty in the process**, a 5 min chart and 2 min chart Process Management System.

I embrace the uncertainty of the market, with a Probabilistic Mindset.

One trade at a time.

The process is the peace.

IF – a 5 min chart **CISD** on the *"Universal MFB Flow/Sweep/FVG-123 Setup" indicator*.

THEN – 2 min trade entry management – move stop to first FVG beyond the trade entry – move stop to successive FVG's – no take profit –

<u>And for anyone who prefers the RSI Divergence and FVG-123 strategy -</u>

Here is the **5 min and 1 min RSI divergence trade strategy for MNQ** – (Like the Gold futures trading idea – "GC – PDF – 8-7-26")

These are small risk trades, and offer good opportunities.

IF – RSI Divergence signal on the **"MFB – Value Acceptance"** indicator.

THEN – *<u>Set the "Universal MFB…" FVG-123 alert in the direction of the RSI Divergence</u>* -if there is an FVG-123 signal, then verify that the

“Momentum” is in agreement with the RSI divergence and FVG-123 (meaning price is leading the 9-20 EMA flow) –

Risk Management is the same as usual.

Stop to the FVG beyond the trade entry, then each successive FVG, to secure profit -
