

Peace – here is a description and a few pics of how the “**MFB – Order Flow 7**” calculates price/delta divergence –

Here is a Luxalgo – “” description of how the indicator works.

How MFB - Order Flow 7 Measures Price and Order Flow

On a 5-minute chart, the indicator first looks for price to touch an enabled key level. It selects the closest touched level—or shows both names if levels are essentially tied—and begins tracking the **next completed candles**. With the default setting, it uses **7 completed 5-minute candles**; the lookback is adjustable from 1 to 20.

Price behavior: It compares the open of the first counted candle with the close of the seventh. A higher ending close means net price progress was up; a lower close means it was down. This measures the window’s overall progress, not the direction of every candle inside it.

Order flow: Across those same candles, it adds each footprint candle’s delta. Positive cumulative delta means more aggressive buying than selling over the window; negative cumulative delta means more aggressive selling than buying.

The comparison shows **agreement** when price progress and delta point the same way, and **divergence** when they point opposite ways. It provides context—not a buy or sell signal. The indicator cancels its active reading if price closes beyond the selected distance from the key level, and it needs valid footprint data for all counted candles to classify the result.

Price is at - “Initial Balance High” – (NY)

Peace – And here is how the “Awareness box” might help (default “hidden” in settings – text size is adjustable)

The **Awareness box** is a beginner-friendly explanation of what the indicator is currently tracking. It identifies the active key level, explains the price/order-flow relationship, and reminds you what structural confirmation to wait for—without treating the reading as a buy or sell signal.

It also clarifies when there's **no current reading**. In this screenshot, it says price moved outside the active range, so the previous level context is no longer being presented as current. The box is optional and hidden by default.

Peace -
