

order of operations

Forex factory . com
(By the way what are the most market affecting announcements?)

write down announcement times that could create short term rallies or drops

- check Dollar index (make note) ino . com
- check S & P (make note) dailyfx . com
- " Crude oil fx tech strategy . com
- " Gold

GBP and CAD strengthen with rising oil
 USD and JPY are inverse to rising oil .
 AUD and CHF are stronger when Gold is up
 Better USD if drop in S and P - (cashing out)

CHF is "safe haven" when U.S. - crisis -

check "yen pairs" - because JPY has low interest rate
 "carry trade" any opportunity?
 (always go by price charts)

Daily
 label "Daily" to a workings

Check Daily for price turns
 EMA is "fuel", A
 what is previous price resistance to the new impulsion?
 price has a memory .

put Fibonacci projections where does price impulsion "originate"?
 check length and time

Mark all levels

if slowing then soon correction

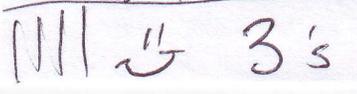

What stage are we in?

Analyze using "measured move" (3 or less candles means less resistance to move)

use Elliot wave's trend : 3 and 2
 counter trend : 2 and 1

3 or more clusters are showing less supply/demand imbalance, more difficult to break through level

higher lows, higher highs = trend
 lower highs, lower lows

Are we trending, ranging, or consolidating?
 Impulsion, correction or reversal forming

The more time in consolidation, the less imbalance... (2)

In the future though, strong moves will mean something.
Monitor these pairs... also check past price lows and highs

Also, previous resistance is strong support. (still Daily) Check Fib retracements

where did price turn in the past? "Round #s" 38% ~~46%~~ 61.8%

"parabolic means price will have to go back the other way."
"Whoa..." if a crisis, people will get safe to CHF, Gold, USD T-bills

For EMA's: 10, 20, 30, 50, 200 "Fuel"
"close price" yellow, blue, purple, red (light colors) still Daily
Faith is more precious than gold 1 Peter 6:8

Again Fibonacci (thank you God)
u-turns are common at 61.8%
our targets are based on previous resistance. 76% Fib are common for shock clusters and bounces

Rally / base / Drop Drop / base / rally
"high probability" check for

- ① location within
- ② Fib projections
- ③ origination areas in Daily

Now 4 hour for support/resistance (label 4 hour)

Do Fibs... (label 4 hour)

check EMA

trending, ranging, consolidating?

structure within a structure

retests of area means less of buyers/sellers

ex:

less sellers left after this. less sellers left after this

(The smaller time frame is less significant)

We need to analyze each time frame in order to understand how the "primary" (4 hour) is manifesting from

Is there room in the 4 hour for 60 min move (same for 30 min, 15, 5, 1 min?)

4 hour, 60 min, 30 min, 15 min, 5 min, 1 min

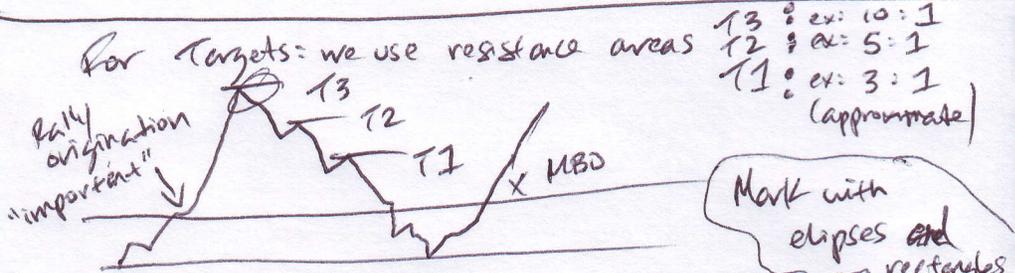

Seek the path of least resistance -

"freeway", "impulsion"

We trade in 1 minute intraday and can manage risk better this way.

If our 4 hour is trending with EMA's proper order then check other time frames all the way to 1 min and be patient for opportunity

Are impulsions buyers or sellers ... this shows us sentiment. where are the supply zones, where are the demand zones?

Each time zone should show EMA's ("fuel")

We must have room from the previous time frame for profit ...

ex: If 15 is beginning a trend ... check for 1 min EMA's ... (always label time frame for markings)

What a wonderful challenge. We're good detectives. Enjoy the discovery. Trading knowledge is a valuable form of capital. Plan the trade, trade the plan. God bless.
