

## **TEAM CAMP "KEEP IT SIMPLE" MEFBMIND- ALL- A-GEE, WHAT ABOUT 1 HOUR "CANDLE" TRADING STRATEGY?**

*All we are trying to do here is ask ourselves a good question about 1 hour candle strategy for when we get there..."something to chew on"*

**1) O.K. so we know our Daily Time chart M's (supply) and W's (Demand) long term position investor Forex "something" for everyone trade strategy. "Extreme supply and demand".**

**Based on supply/demand “level”, “price turns” history, we can expect price to turn near (just after) 0.8500...because Daily Chart (significant) says so...?**

**The picture above showed the 1<sup>st</sup> wave impulsion of the “M” structure MBO ( momentum breakout)...remember it’s always only “momentum or not”...Impulsion or correction...one or the other, so we have to keep it real....”we can’t kid ourselves” ☺**

**1) What about 1 hour candles shorter term trading for an income stream?...well, we will look for “M” and “W” structures too...! that are not near opposing supply and demand zones...”Any meat on the bone”? Is our 50 close EMA turning to push price? What do our larger correlations tell us? Is price moving sideways (correction), or is there an impulsion opportunity? Is the structure in an impulsion or correction phase in Daily (forest from the trees)? Is this 1 hour structure within a 1<sup>st</sup> wave or 3<sup>rd</sup> wave Daily time chart...beware of the 5<sup>th</sup> wave, it may not go...”let me count the waves”...What tells us that an “M” or “W”**

**structure that we find will move? Our 1 hour position in the larger Daily time chart? These are the questions to ask...**

**We either have an “M” or “W” structure in 1 hour or not!**

**We are either in a correction or impulsion in the larger time frame (correction phases are very unpredictable, because it’s “workin’ thangs out”)**

**We are either in a “price move pocket” or not!**

(not near opposing supply or demand zone, and never on the 5<sup>th</sup> wave progression in Daily Time chart...1<sup>st</sup> and 3<sup>rd</sup> always go)

**Where is our “M” or “W” structure Location, Location, Location?!!! Has a larger Daily Time chart level been broken which tells us price behavior sentiment...this is very important, just as strategy is necessary to protect our rules:**

# **1) CAPITAL PRESERVATION**

## **2) RISK MANAGEMENT**

### **3) PROFIT MAXIMIZATION (1, 2, 3)...N' DON'T TRIP ON OUR 4 ☺**

**Never buy into an extreme supply zone and never sell into a larger demand zone!**

**Here's a few thoughts about "Wave principle" thinking that tends to work in 1 hour time charts**

*Notice the larger "M" structure, to the right is the 1st wave of the price movement, after the larger structure "progresses" as trees and universal entities like galaxies and DNA does....the 1st wave will correct into wave 2, and a new 1 hour structure will develop to reveal price action into a 3rd wave....don't trust the 4th wave (correction) and 5th wave...it's often is what's called a truncation, and will not form wave 5. 3rd wave will always develop...pondering these thoughts....stacking probabilities...THE 1 HOUR TRADE BELOW WAS IN THE Daily Time chart 1<sup>st</sup> wave...so this worked...Hmmm ☺ We're onto somethin' here...! God bless Team Camp and all the loved ones...*

*Always see the Forest from the trees...if we are looking just at the trees (1 hour chart candles)...then we are not perceiving the Forest (Daily chart) "significant" perspective...hmmmm? from all of us grasshoppers ☺*

*Respect us (below)...we need our peace and health, and then we can smile at the world...our love for the world and all that good stuff...if they stop hatin' out of impulse....and recognize that all the "airspace" related Rap/Media material was created by all of us...we'd be more "adjusted" to what happened...and what is currently happening...☺*
